

Bio-economic modelling of Fishing Aggregation Devices (FADs) and management issues

Olivier Guyader, L. Reynal**, Jean Boncoeur****

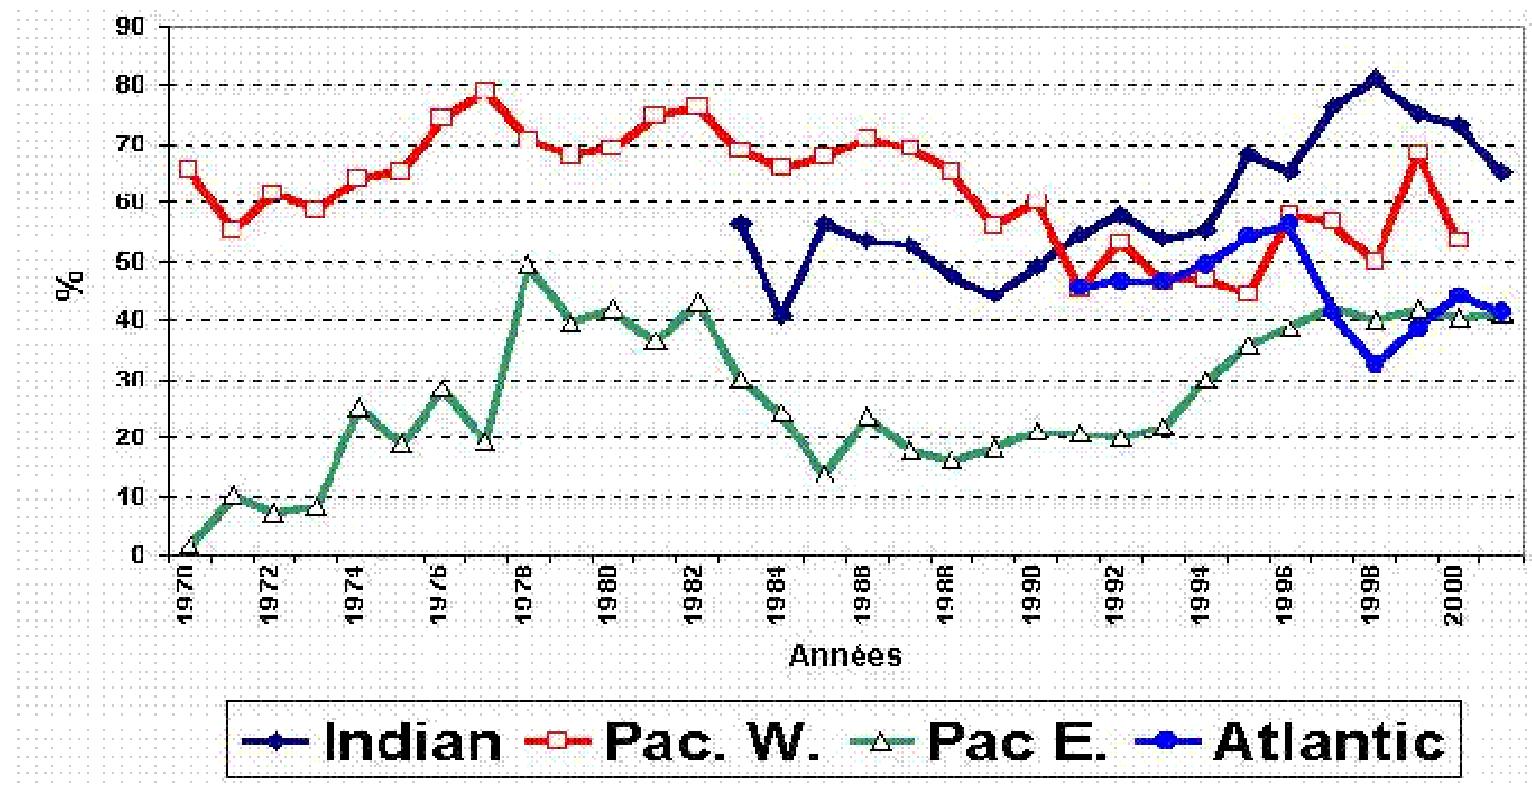

** Ifremer – UMR AMURE*

*** Ifremer – Lesser Antilles fisheries unit*

**** University of Brest – UMR AMURE*

1. Context

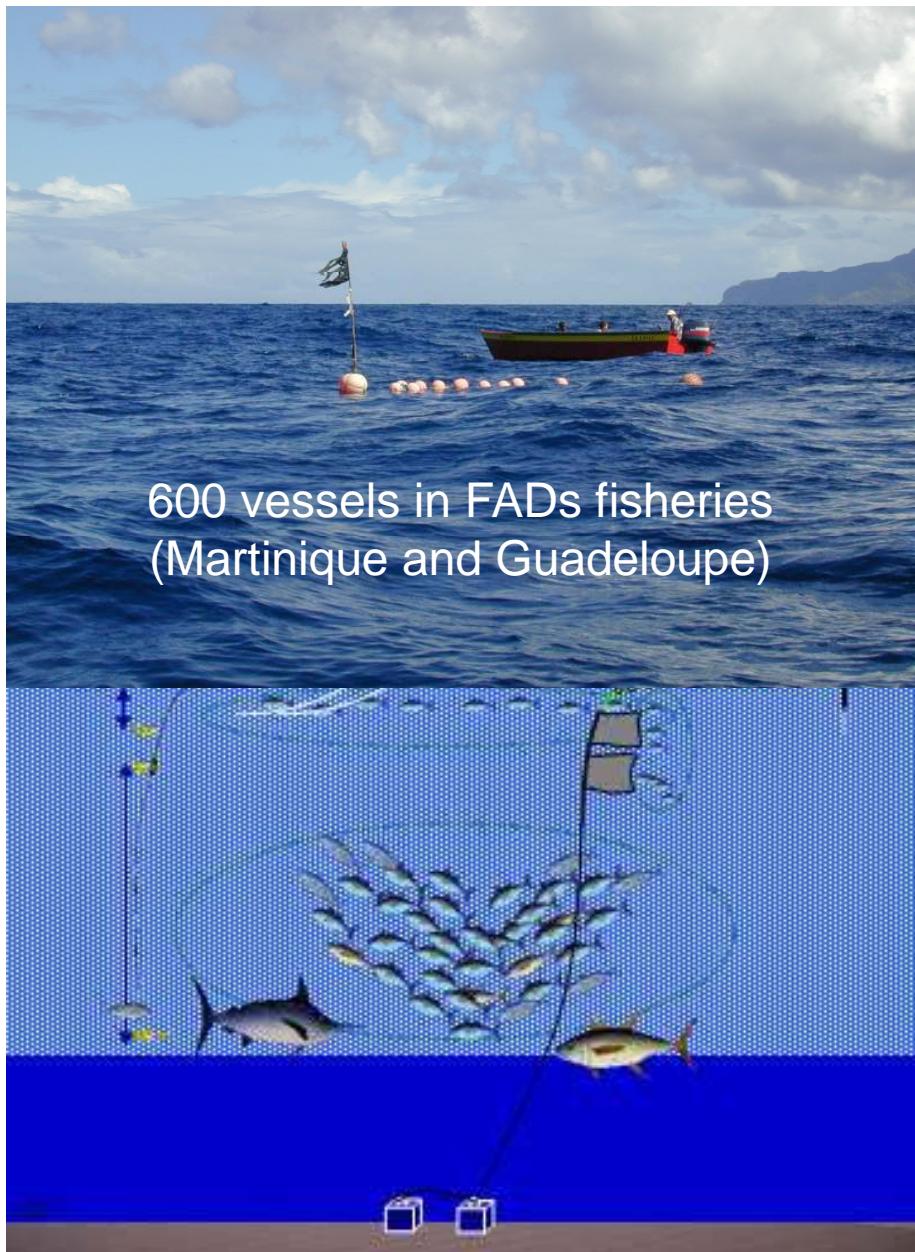

☞ More than 50% worldwide tuna catches under FADs (Fonteneau et al. 2000)

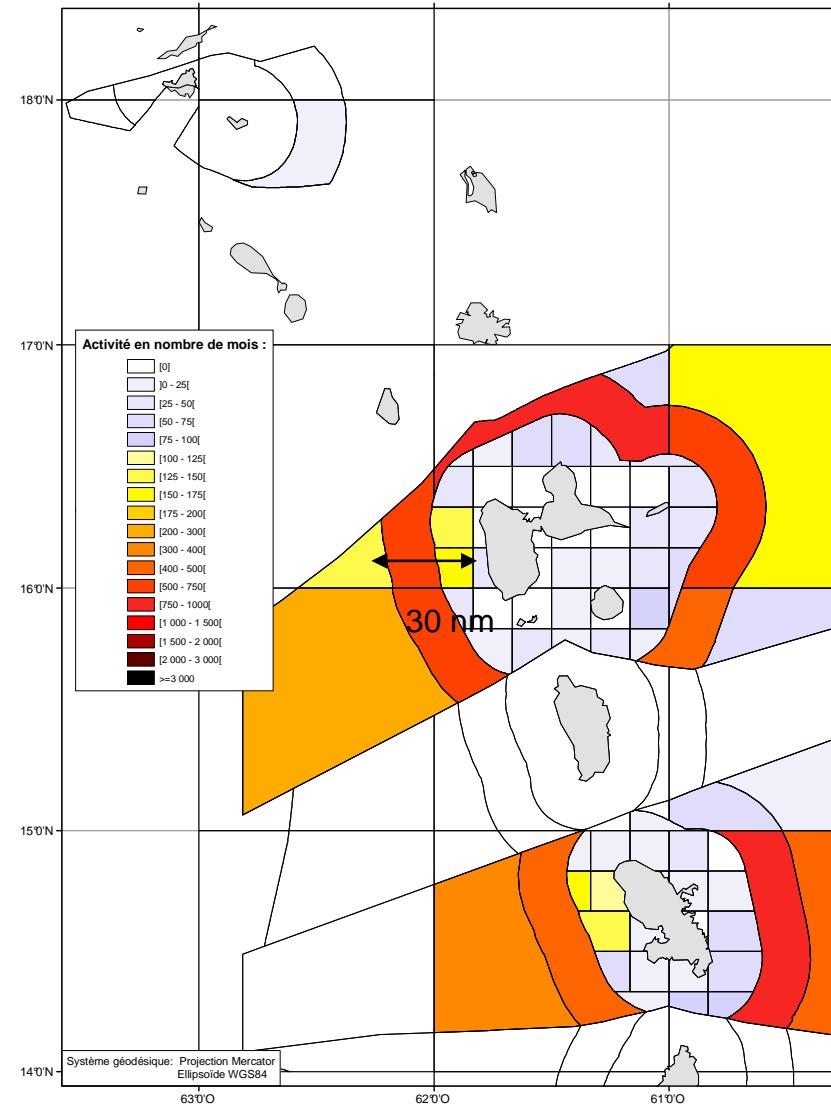

LARGE (capital intensive)
purse seiners using
DRIFTING man-made FADs
in OFFSHORE AREAS

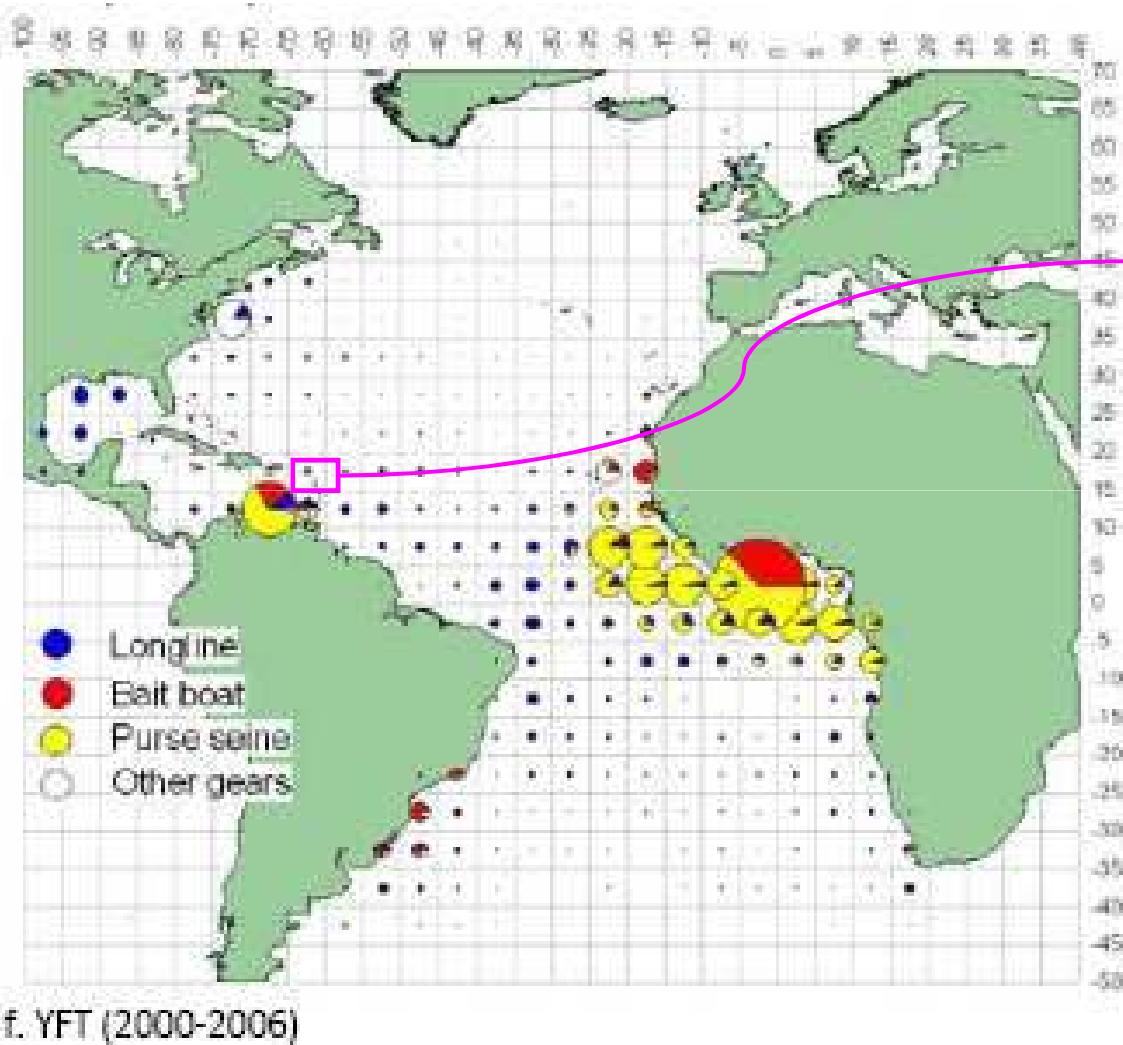

MOORED COASTAL FADs operated by SMALL SCALE FLEETS

Activité de pêche 2006 dans les Antilles françaises : DCP Lignes et Palangres (L..)

Geographical distribution of yellowfin catch by major gears

Contribution to total fishing mortality is low
⇒ Lesser Antilles as « resource takers »

2. A simple model of FADs-Vessels interactions

a) FAD interactions

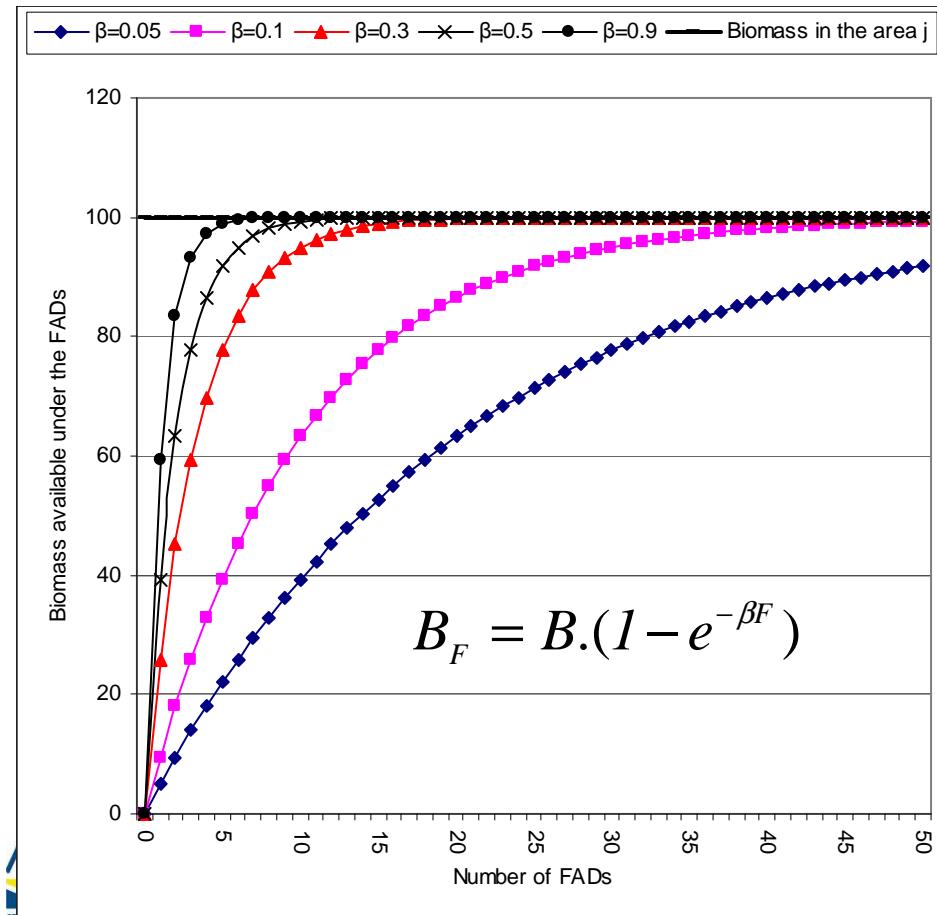

An area i (size=1)

B: Biomass available in the area for a period t

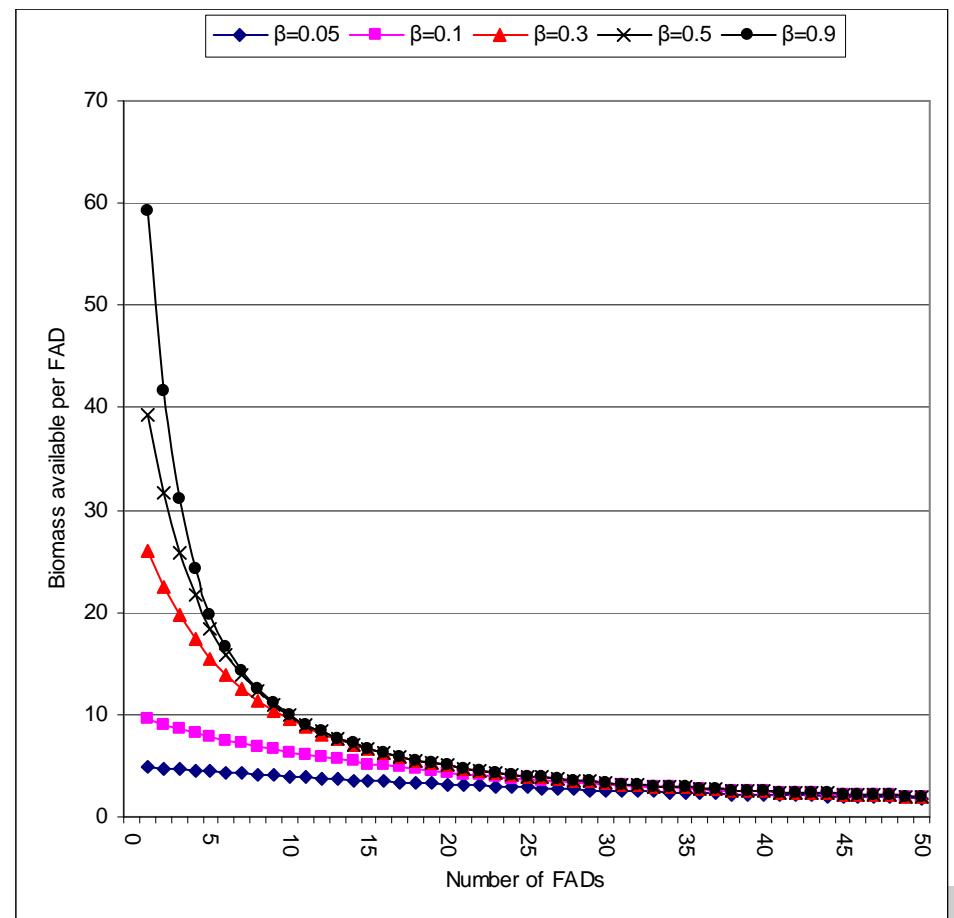

F: Number of FADs in the area

β : Agregation capacity / attractivity of FADs

Biomass under FADs vs Number of FADs

Biomass per FAD vs Number of FADs

b) Vessels interactions → Catch function under FADs

K : Number of vessels in the area → K/F : number of vessels per FADs

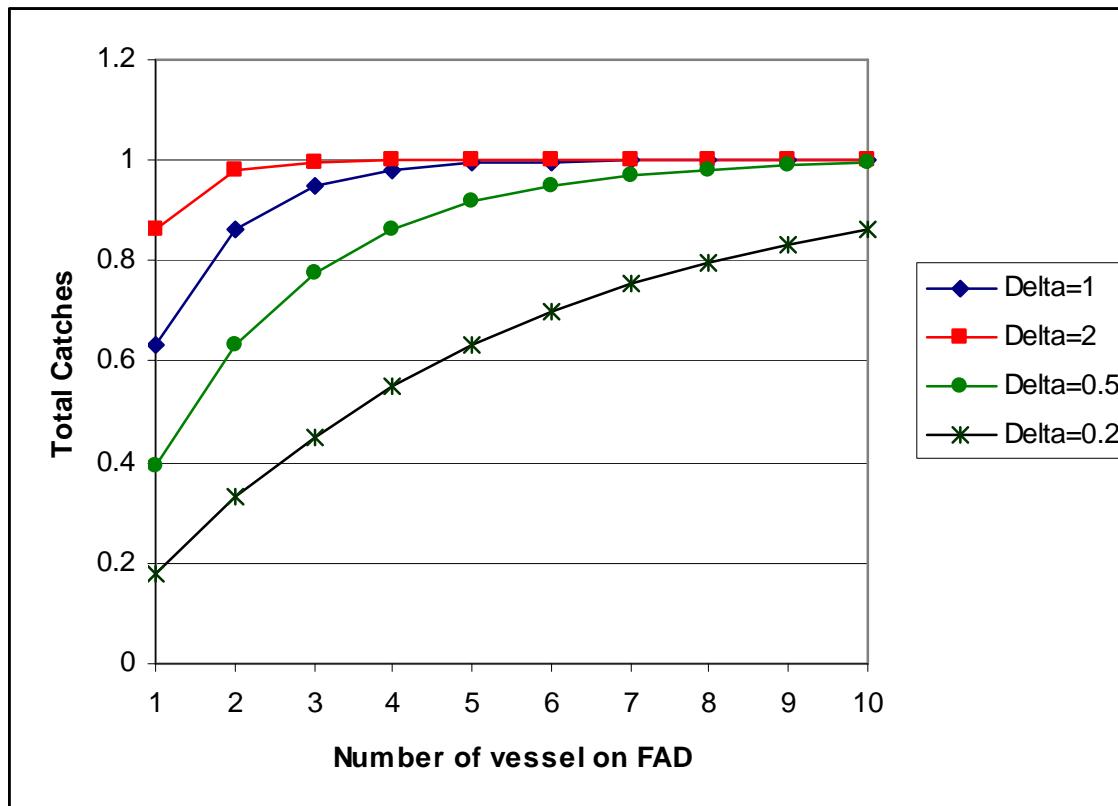

q_m : Catchability coefficient

δ_m : Index of interaction around FAD which depend on fishing techniques/targeted species

☞ Evidence of interactions

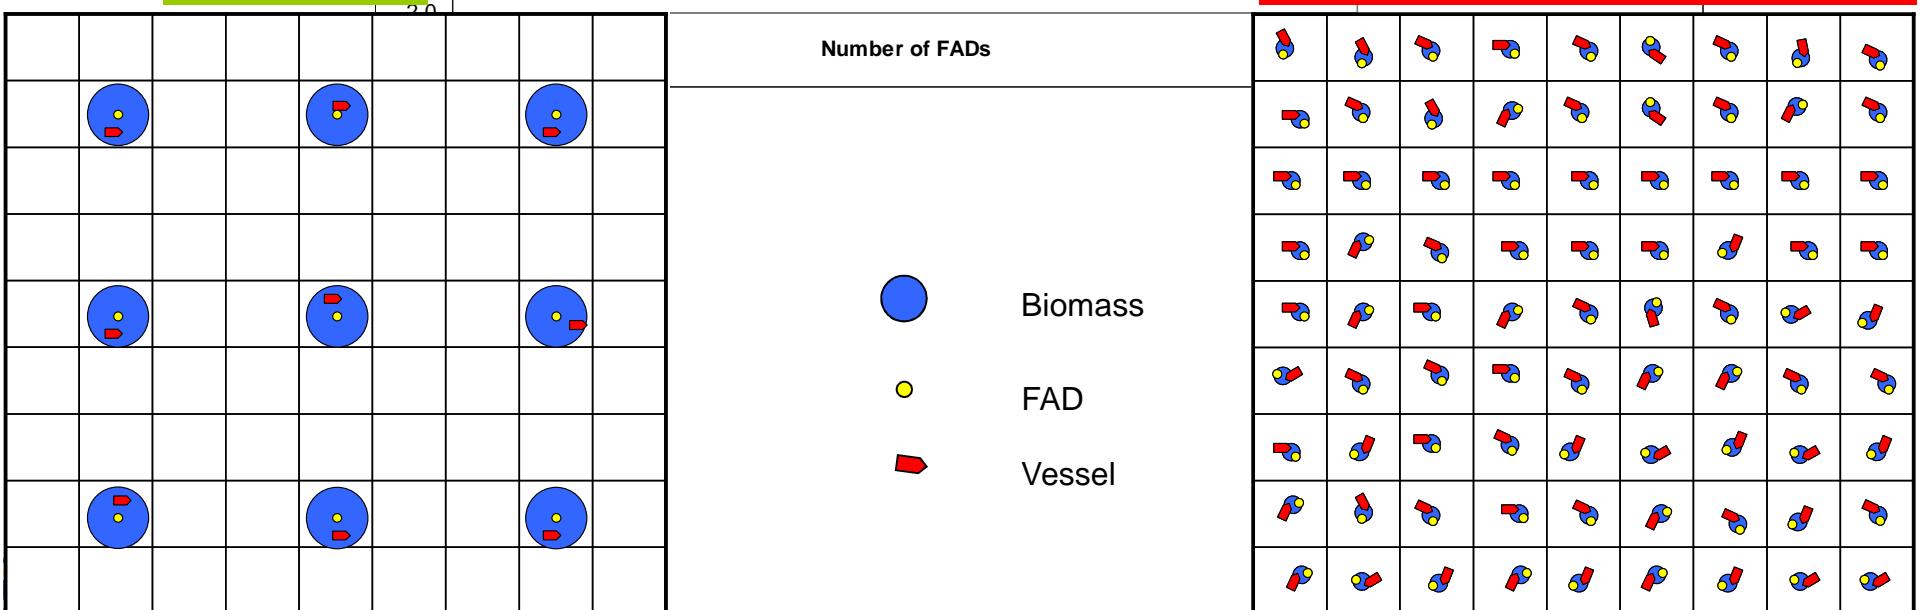

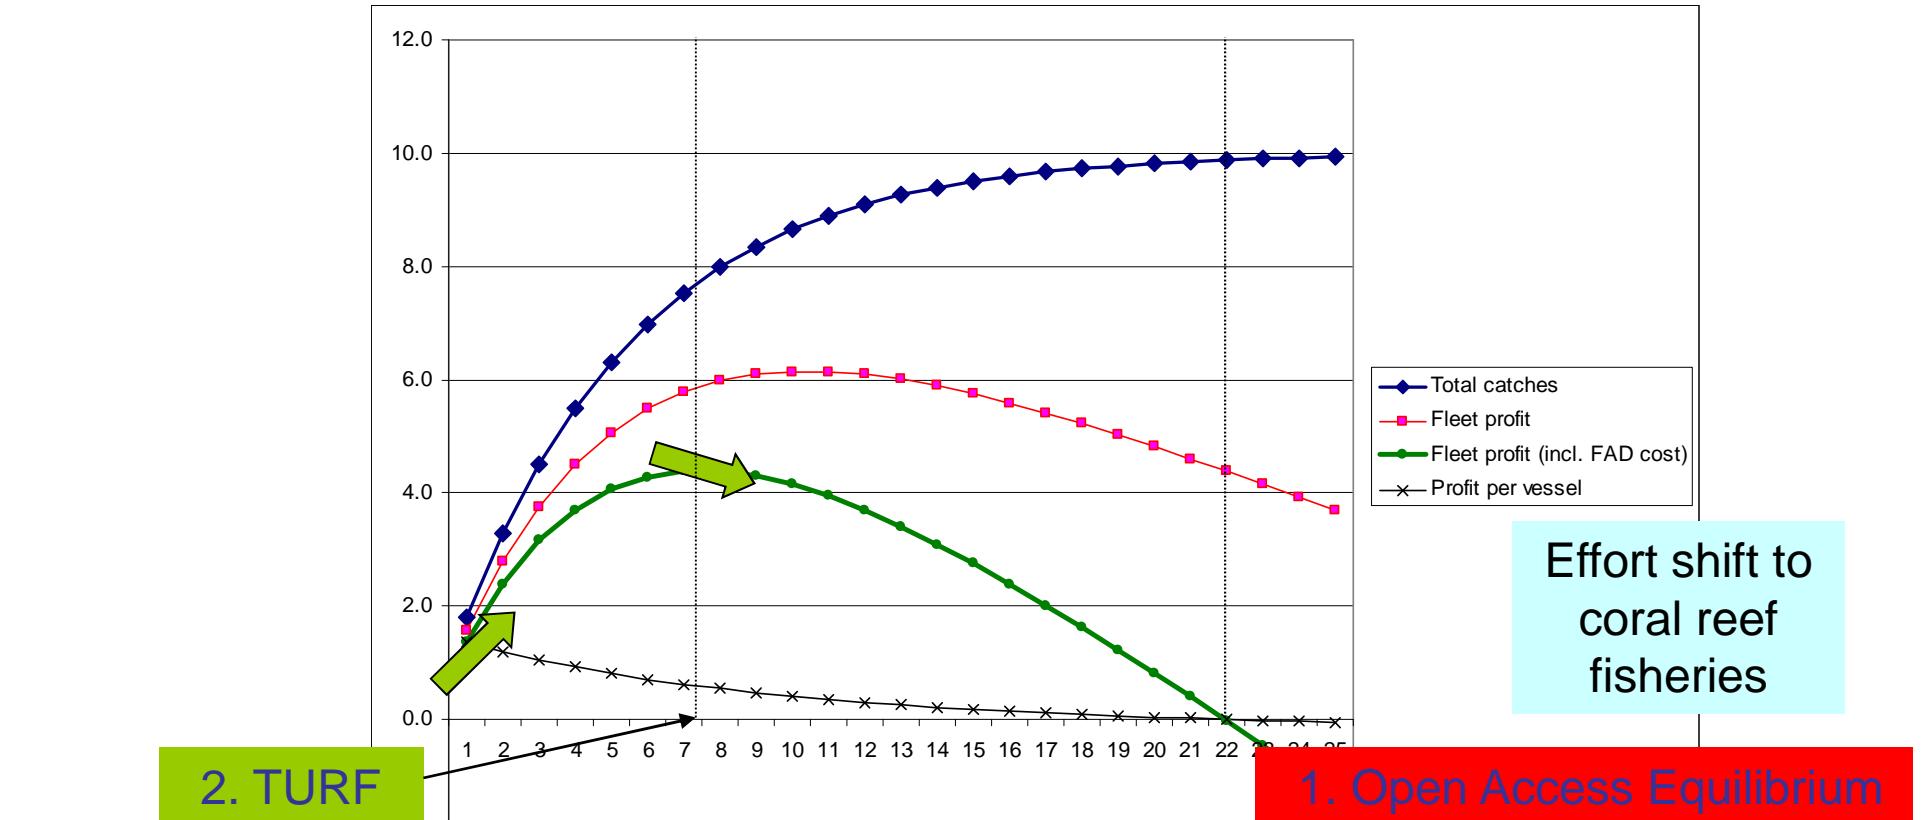

- Dolphinfish in Guadeloupe
- Drifting longlines (Lesser Antilles)
- Purse seiners (?)

Total Catches per FAD vs number of vessels per FADs

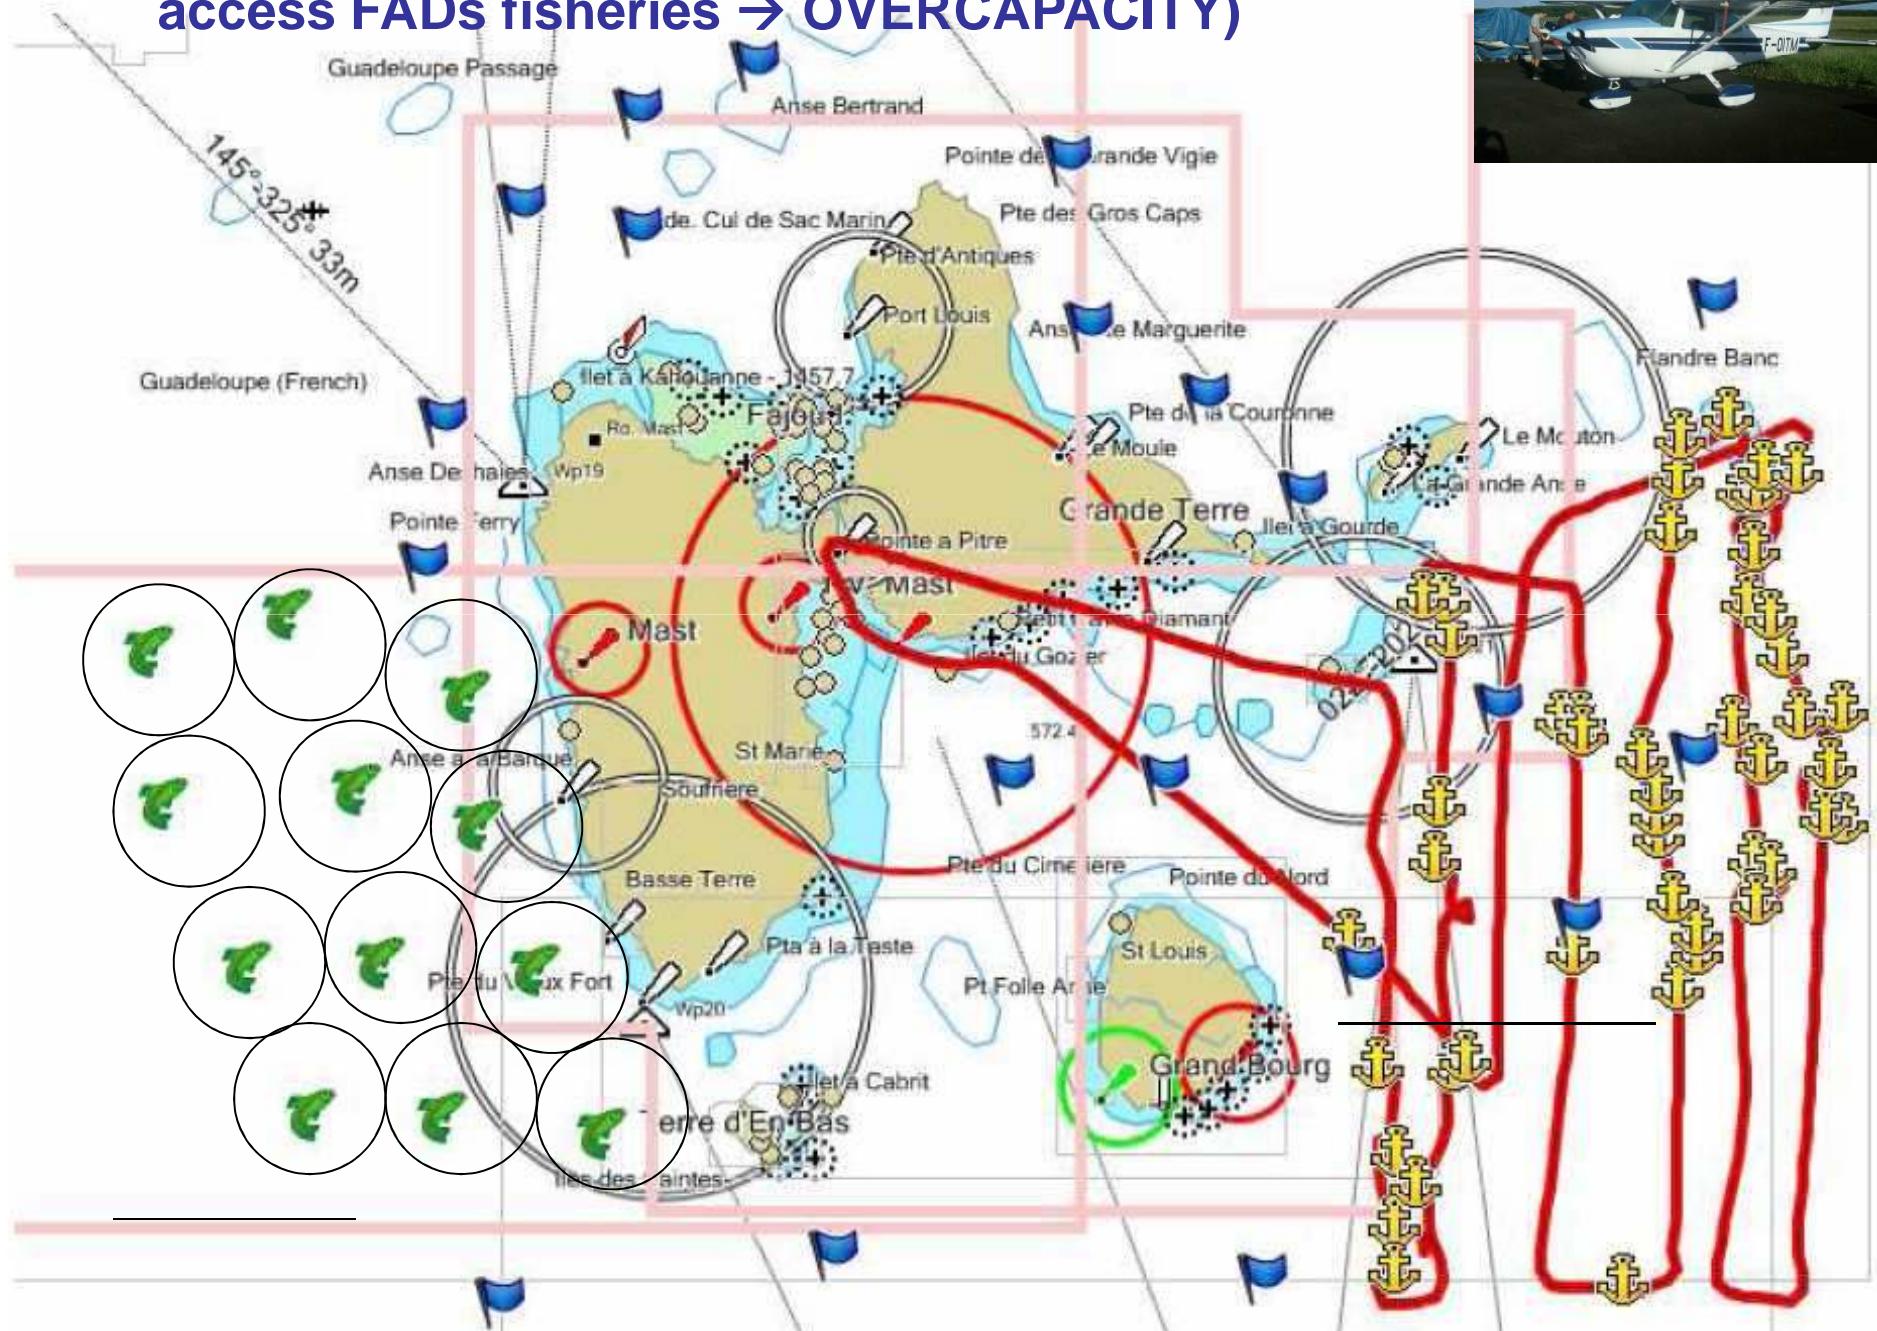

3. Implications for fisheries management

- 1. Open access**
- 2. TURFs (Spatial allocation)**
- 3. Collective regulated FADs**

Aerial survey of the FADs density in Guadeloupe (open access FADs fisheries → OVERCAPACITY)

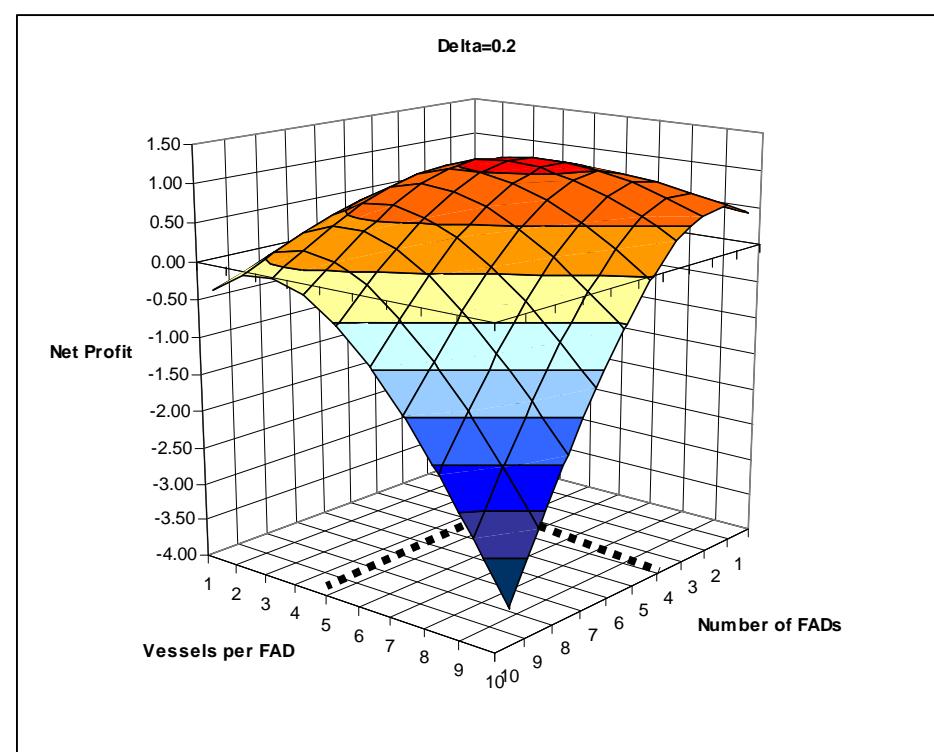

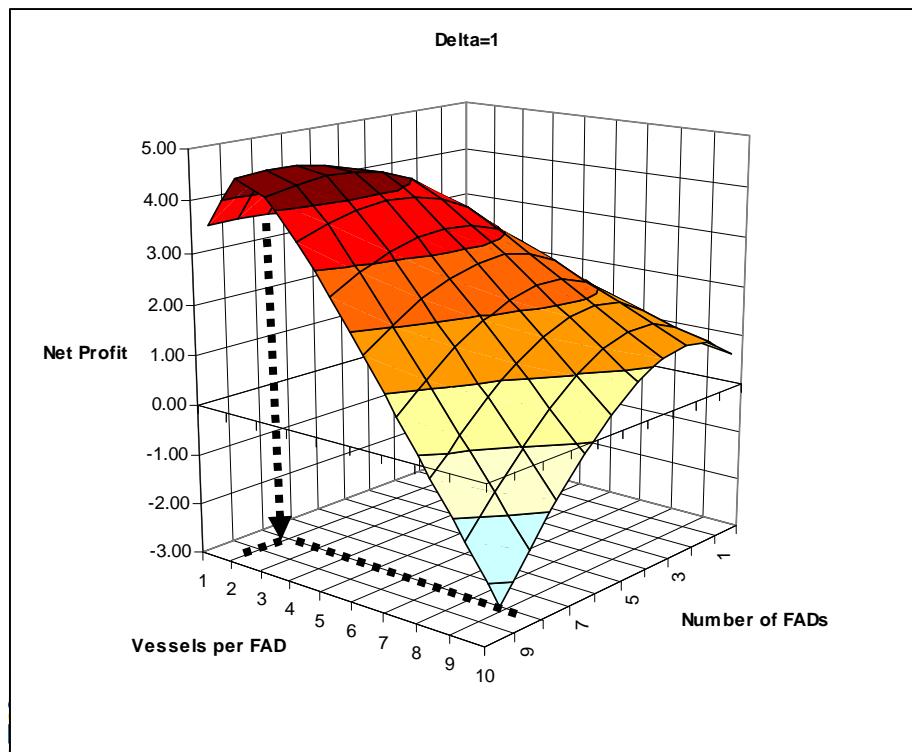

3. Collective set of FADs (organized network)

Optimal number of FADS and Vessels per FAD given different levels of interaction

Given a number of vessel, what is the best number of FADs given FAD unit cost ?

.....

4. Conclusion

FADs regulation required including access regulation (individual fishing permits, ...)

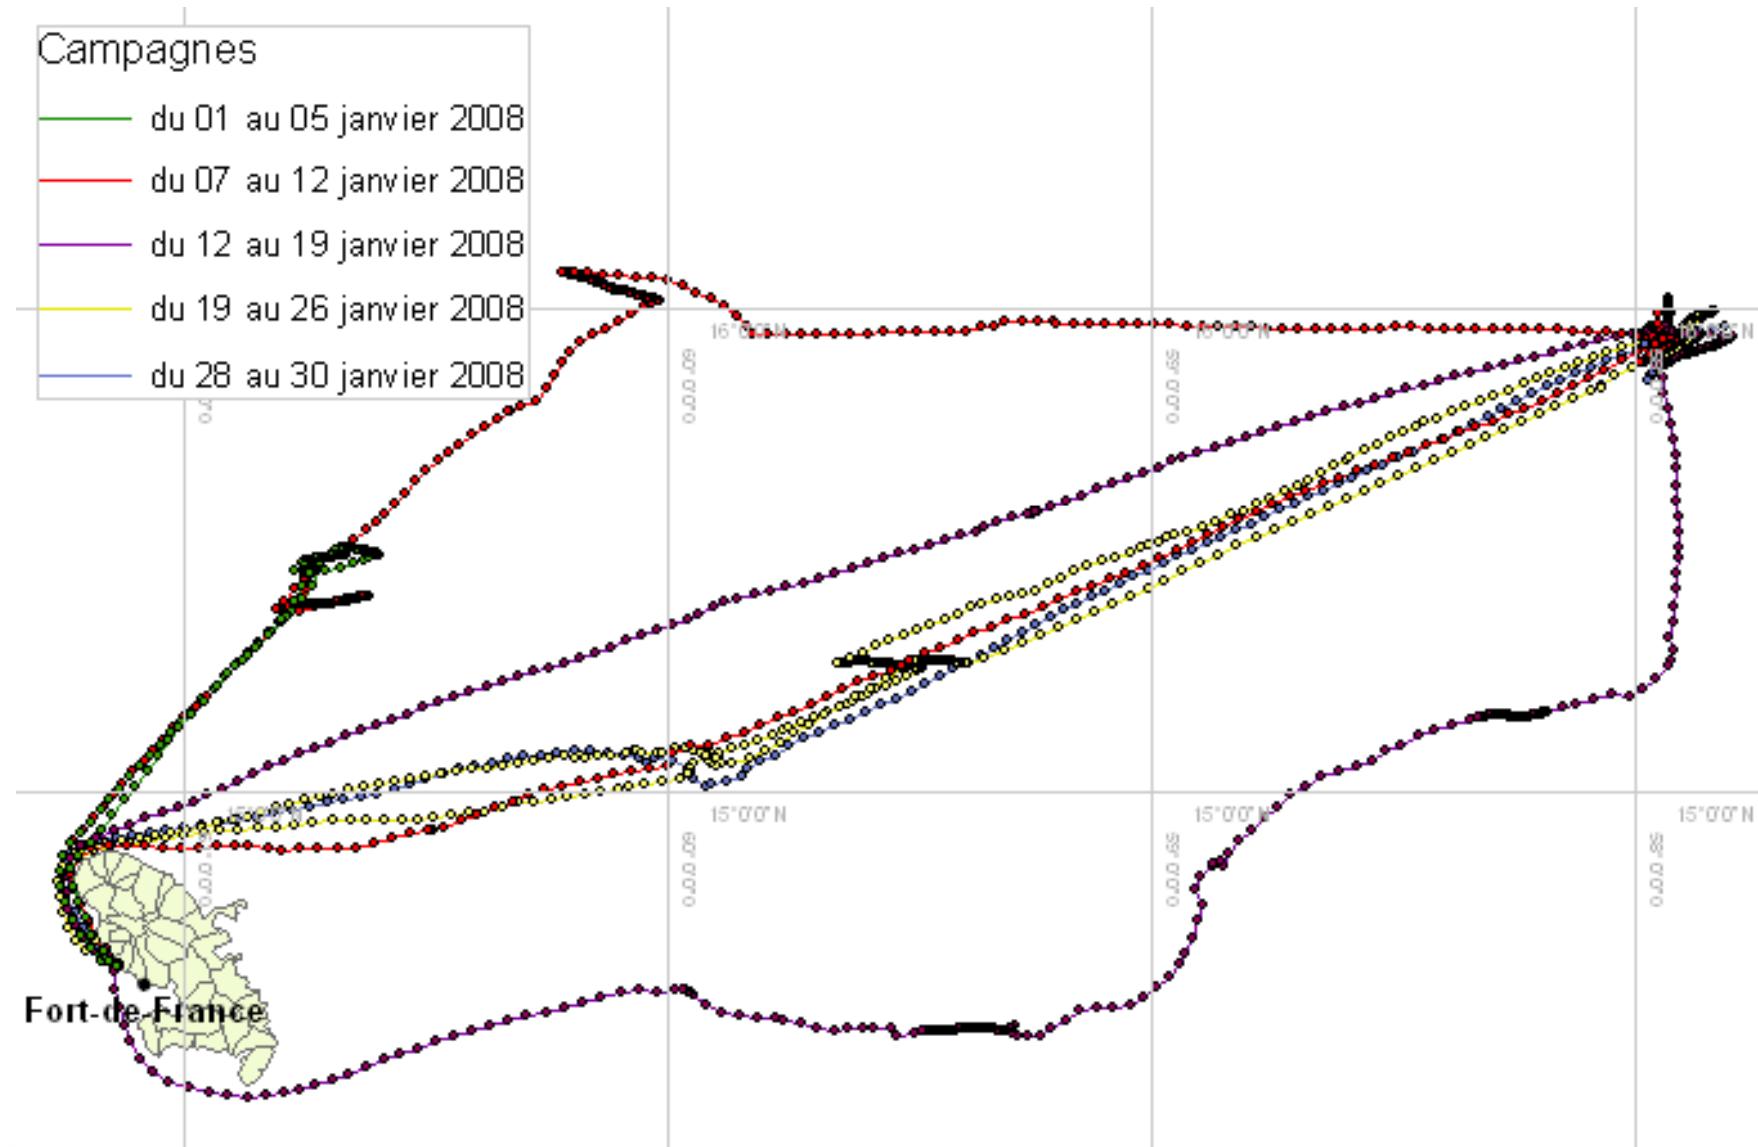

On going / future work on :

Fish and Fishermen dynamics around FADs and between FADs

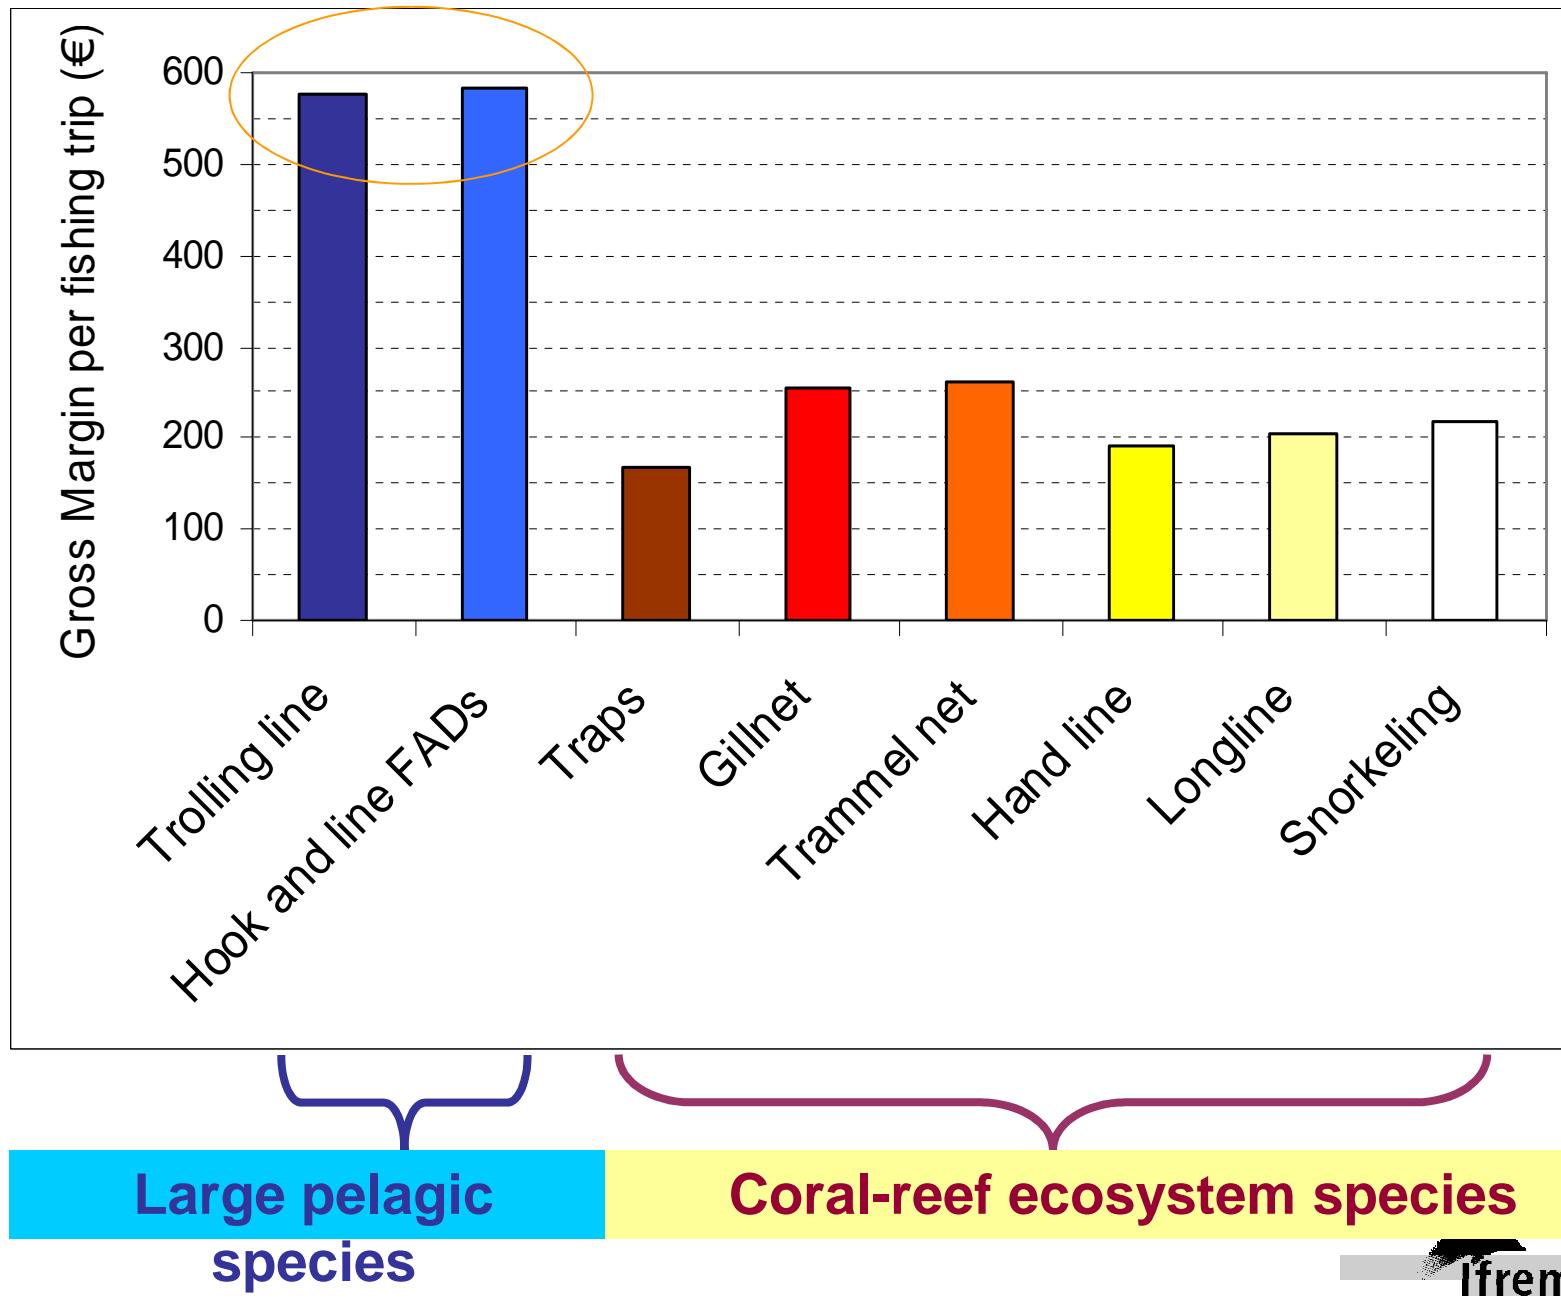

Interactions between FADs fisheries and coral reef fisheries

....

✓ Analysis of fishing strategies through GPS tracking

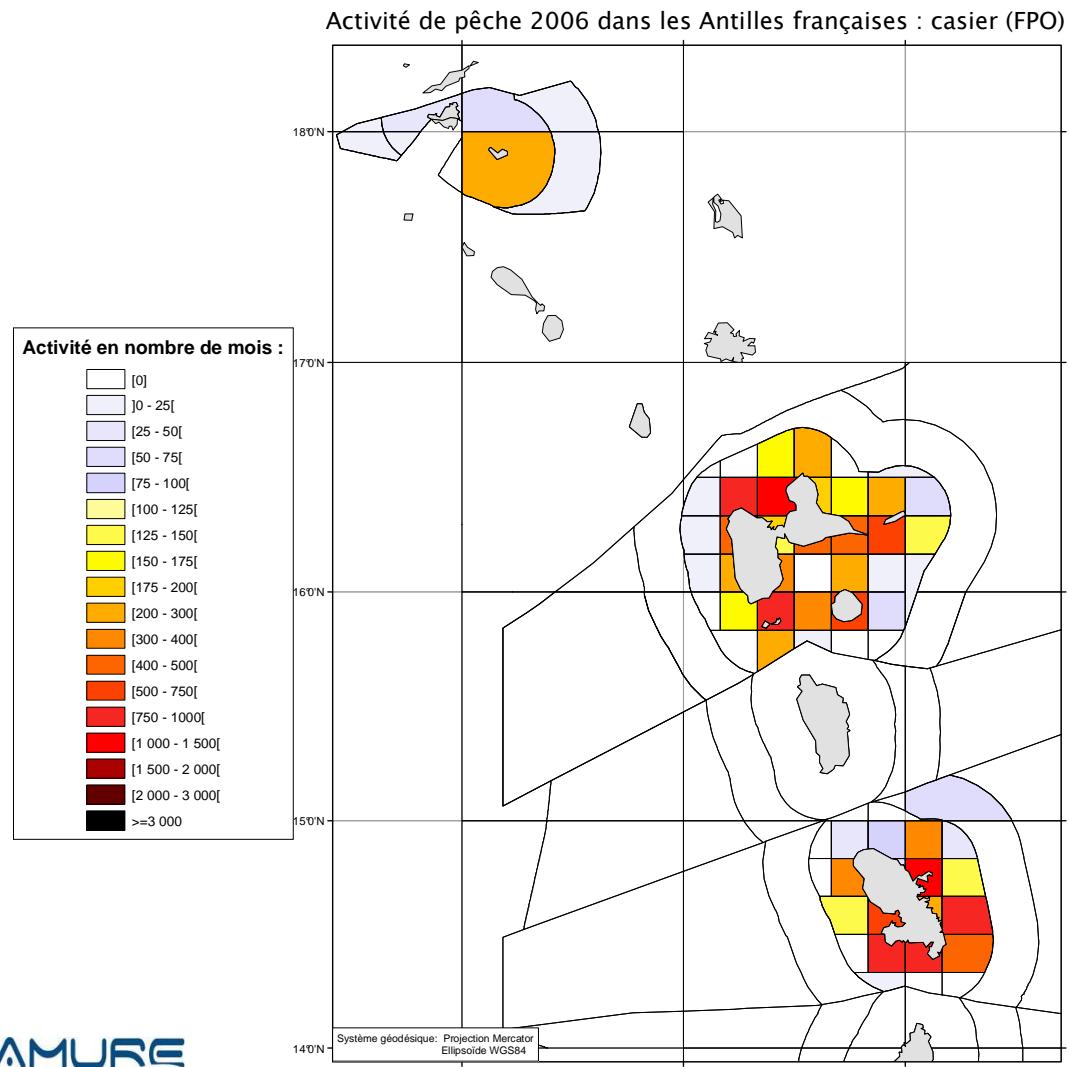

Current 2008 average gross margin per gear type (€/trip)

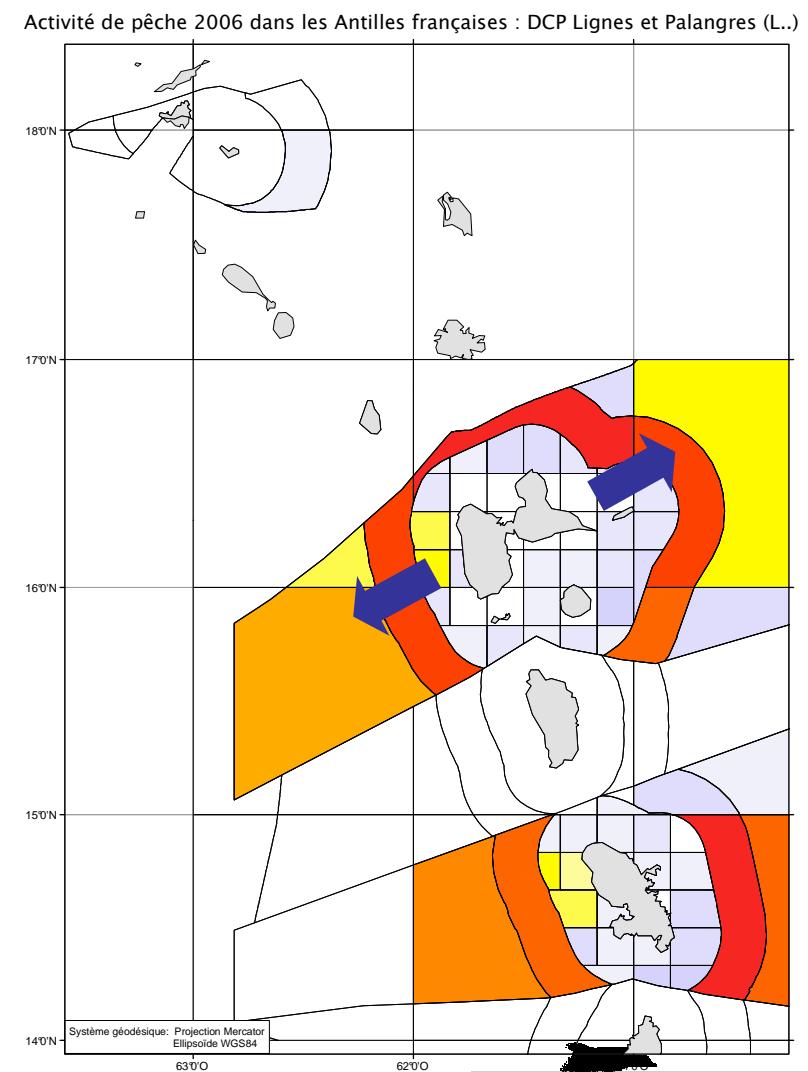

Répartition spatiale de l'activité (en nombre de mois métiers)

✓ Casier

✓ DCP

✓ Allocation of effort between coral reef fisheries and pelagic (FADs) fisheries
